Subject: **2015 Annual Report – RWQCB Order No. 00-046**  
**Former Oyster Point Landfill/Current Oyster Point Marina and Park**  
**South San Francisco, CA**

Dear Mr. Pal:

On behalf of the City of South San Francisco, CSS Environmental Services, Inc. (CSS) is pleased to submit this 2015 Annual Report for the former Oyster Point Landfill and current Oyster Point Marina and Park. Please call me if you have any questions at (415) 883-6203.

Sincerely,  
**CSS Environmental Services, Inc.**

- Appendix B – Historical Water Quality Analytical Data

## 1.0 INTRODUCTION

The Oyster Point Landfill is a closed, unlined Class III landfill located along the San Francisco Bay in the City of South San Francisco (City) (Figure 1). The City owns the landfill. The majority of the landfill is open space, but a portion of the landfill has been developed and includes a public marina, boat launch, a ferry terminal, a small yacht club, a boat sales building, and a small office and hotel complex (Figure 2). The San Mateo Harbor District (Harbor District) operates the public marina on the landfill and is responsible for general maintenance of the marina and public spaces.

The landfill is regulated by the Regional Water Quality Control Board (RWQCB) under Order No. 00-046 issued on June 21, 2000 (Order). The Order imposes closure and post-closure requirements on the City as part of future development. This 2014 Semi-Annual Monitoring Report was prepared in compliance with Provisions 3 and 4 of the Order.

The primary purpose of this report is to document compliance with the requirements of the Order. It presents the results of water quality monitoring and site inspections completed to date for the period July through December 2015. Leachate and groundwater monitoring was conducted per the November 2000 Water Quality Monitoring Plan (WQMP) as amended in August 2001 (Addendum 1) and as amended by the July 2004 Maximum Allowable Concentrations Limits (MACL's) report. The WQMP and MACL's reports describe the water quality monitoring program for the landfill. Additional inspection and sampling requirements are also included in the following documents:

- June 2015 Storm Water Pollution Prevention Plan (SWPPP)
- September 2000 Final Closure and Post-Closure Maintenance Plan (FCPMP)
- Emergency Response Contingency Plan (ERCP)

This report is organized as follows:

- Section 2 describes landfill monitoring, inspection, maintenance, and development activities since the last reporting period.
- Section 3 summarizes the water quality monitoring programs in place at the site.
- Section 4 presents the results of water quality and landfill gas monitoring to date.
- Section 5 summarizes the results of site inspections and describes proposed maintenance activities.
- Section 6 provides a list of references.
- Appendix A includes laboratory analytical data sheets for the period July through December 2015.
- Appendix B presents historical analytical data, including parameters no longer included in the monitoring program.

## 2.0 LANDFILL ACTIVITIES SINCE LAST REPORTING PERIOD

The 2015 Semi-Annual Report (CSS Environmental Services Inc, July 31, 2015) summarized activities completed between January and June 2015. This current report includes activities completed at the former landfill from July through December 2015.

### ***2.1 Leachate and Groundwater Quality Monitoring***

There are 18 monitoring wells included in the post-closure monitoring program. The monitoring program is described in detail in Section 3. The program includes both groundwater and leachate elevation monitoring and water quality sampling.

Groundwater and leachate elevations are monitored quarterly, while monitoring well sampling and analysis is performed semi-annually. Elevations were measured on September 3 and December 14, 2015. The analytical program is as specified in the November 2000 WQMP as amended in August 2001, and amended by the MACL's report. This program varies from the prescriptive list of analytics included in the Order.

Groundwater and leachate samples were collected from select wells on December 15-17, 2015. The samples were analyzed by TestAmerica, in Pleasanton, California. Laboratory analytical data sheets for the second semi-annual groundwater monitoring event are included in Appendix A.

### ***2.2 Landfill Gas Perimeter Monitoring***

There are a total of 10 landfill gas monitoring wells installed along Oyster Point Boulevard and Gull Drive (LFG-1 through 10) and three remedial venting systems (PVT-1, PVT-2, and PVW-1), as shown on Figure 3. During the current reporting period, quarterly landfill gas monitoring was performed at the monitoring wells on September 21-22 and December 31, 2015. Historical landfill gas monitoring results are presented in Tables 5 and 6.

In 2007 passive venting trench PVT-1 was installed near LFG-9, and passive venting trench PVT-2 and venting well PVW-1 were installed near LFG-3 to remediate elevated methane concentrations in their vicinity. Between September 2007 and October 2008 intensive monitoring was performed on LFG-3 to evaluate the performance of the venting system and methane concentrations declined to less than 5% for the last 6 months of monthly monitoring, leading the City to revert to quarterly sampling of LFG-3 as described in correspondence to the SMCHSA, the CIWMB and the RWQCB from the City of South San Francisco on September 30, 2008. During 2010 landfill gas concentrations in excess of 5% were found twice: during the first quarter a concentration of 7.7% was found in LFG-9 near passive venting trench PVT-1 and during the second quarter a concentration of 6.0% was found in LFG-3. Methane concentrations subsequently declined to below the regulatory limit of 5% methane in all perimeter monitoring wells. During the first and second quarters of 2011, methane again was found at elevated concentrations of 7.4% and 5.2% in LFG-9. Of the remaining perimeter wells that could be sampled all were below 5% methane. During the third quarter of 2011, the City installed passive

wind turbines at the exhaust of both of the PVT-1 and PVT-2 venting trenches to encourage landfill gas venting. Methane concentrations again declined to below the regulatory limit of 5% methane in all perimeter monitoring wells during the third and fourth quarters of 2011, all of 2012, as well as the first quarter of 2013. During the second quarter of 2013 the methane concentration at LFG-3 was again above 5% but has since declined to near non-detect.

At the request of the SMCHSA, an off-site groundwater monitoring well, MW-5, was added to the landfill gas monitoring program during the fourth quarter of 2011 and consistently had above 5% methane. A maximum reading of 20.8% methane was found in MW-5 during the second quarter of 2013. This well, shown on Figure 3 as Alexandria Well MW-5, belongs to an undeveloped property (560 Eccles Ave) owned by Alexandria Real Estate and/or Gull Avenue LLC adjoining the former Oyster Point Landfill. The well is located within the City of South San Francisco's Gull Drive easement, about 5-feet west of the curb of Gull Drive. It was installed along with four other groundwater monitoring wells by Environ for Alexandria in 2008 to monitor conditions at a former burn dump (not the former Oyster Point Landfill) and therefore the City considers that any landfill gases therein are likely to be associated with that former land use. During the first quarter of 2014, well MW-5 was found to have a methane concentration of 14.2% and subsequently CSS installed a passive wind turbine here which has successfully abated the methane concentration at the well to below 5% since that time.

### ***2.3 Site Inspections and Storm Water Sampling Completed***

Landfill inspections, per the Storm Water Pollution Prevention Plan, are conducted throughout the year, as required beginning in January 2007. The results from the first half of 2015 are included in the Storm Water 2014-2015 Annual Report submitted in June 2015 to the RWQCB. A copy was included in the July 2015 Semi-Annual Report and these data are not repeated here. The results from the second half of 2015 will be included in the Storm Water 2015-2016 Annual Report scheduled to be submitted in June 2016 and a copy will be included in the 2016 Semi-Annual Report.

### ***2.4 Landfill Maintenance***

The Harbor District and/or the City implemented the following maintenance projects in the second half of 2015:

- Maintained vegetation to control potential erosion in a previously un-vegetated area: several hundred square feet alongside the paved walking path of the southeastern shoreline.

### ***2.5 Reports/Documents Submitted***

The following reports were submitted in 2015:

- 2014 Annual Report, Oyster Point Landfill, dated January 2015
- 2014-2015 Annual Storm Water Report, dated June 2015
- Stormwater Pollution Prevention Plan (for the State's new Industrial General Permit),

June 2015

- 2015 Semi-Annual Report, Former Oyster Point Landfill, dated July 2015
- Quarterly Landfill Gas Monitoring Reports, dated May 22, July 31 (Semi-Annual Report) and November 15, 2015. Data for the Fourth Quarter 2015 Landfill Gas Monitoring is included herein.

## ***2.6 Landfill Development***

As originally described in the 2005 Annual Report, the Oyster Point Landfill was identified by the WETA as a primary site for establishment of a public ferry terminal. The WETA completed its construction during the first quarter of 2012 and the new ferry terminal is in operation. Construction activities by the WETA included waterside dredging of the East Basin Marina Area to accommodate the ferry boat service and demolition of two of the existing piers; and waterside construction of a new ferry terminal and dock. Landside improvements to the East Basin Parking Area included a bus stop and turnaround.

The City has included the Former Oyster Point Landfill in its redevelopment zone and hopes to redevelop the site. Under the first phase of redevelopment the City plans call for a maximum of 600,000 square feet of office/R&D space, envisioned as a biotech campus, and possibly a retail/restaurant building, in the area currently occupied by the existing commercial development at the eastern side of the Site. Phase I will include the reconfiguration of Marina Boulevard and a portion of Oyster Point Boulevard and a shuttle turn-around will be constructed adjacent to the Ferry Terminal. Parcels to the east of the new development will be graded and improved as sports fields. Further east a future hotel and retail complex is considered. The existing Yacht Club structure and the Harbor District maintenance building would remain. The project would include excavation of landfill materials at the former Oyster Point Landfill and relocation of these materials on- and/or off-site. The landfill cap will be upgraded to meet the current requirements of Title 27 of the California Code of Regulations with the approval of the RWQCB and San Mateo County Environmental Health Division. Future phases of development appear to be outside of the landfill area.

The project description included below was approved by the City in March of 2011:

“Oyster Point Redevelopment Project, including a General Plan Amendment, Redevelopment Plan Amendment, Zoning Text Amendment (Specific Plan), Rezone (Zoning Map Amendment), Precise Plan, Design Review, Sign Program, Development Agreement, Disposition and Development Agreement, and Environmental Impact Report to allow the demolition of various existing improvements and the construction of a new office and research and development campus at a 1.25 FAR, road alignment, utilities, park, open space, marina improvements (i.e. parking areas), Bay Trail improvements and public restrooms on approximately 82 acres of property located at the eastern end of Oyster Point Boulevard and adjacent to the Oyster Point Marina, in accordance with SSFMC Title 19, and Chapters 20.040, 20.110, 20.230, 20.300, 20.310, 20.360, 20.400, 20.450, 20.460, 20.480, 20.530, 20.540, and 20.550.”

The City does not anticipate any construction of the project in the next six months.

## **2.7 Activities Planned During Next Reporting Period**

Planned activities next reporting period include continued SWPPP monitoring, and the collection of quarterly water levels, quarterly landfill gas perimeter monitoring data and semi-annual water samples.

The Harbor District and/or the City will continue to maintain vegetation to control potential erosion in a previously un-vegetated area: several hundred square feet alongside the paved walking path of the southeastern shoreline.

On December 9, 2015 the RWQCB issued a letter to the City of South San Francisco noting significant water ponding on the former landfill during King Tides noting that future sea-level rise predictions and landfill settlement could exacerbate water quality problems at and near the former landfill. They require Short-Term and Long-Term flood protection plans. The City is currently working on these plans.

## 3.0 OVERVIEW OF WATER QUALITY MONITORING PROGRAMS

### 3.1 Detection Monitoring Program

The purpose of the detection monitoring program is to detect "measurably significant" leachate migration from the waste-bearing unit into surrounding media, including underlying soil and groundwater and nearby surface water. Components of the detection monitoring program include:

- Detection monitoring network
- Points of compliance
- Contaminants of concern and monitoring parameters
- Procedures for data evaluation

The detection monitoring network consists of monitoring points, which include monitoring wells and surface water sampling locations. Points of compliance are monitoring locations where leachate migration from the unit would likely be discovered, and to which numerical concentration limits (MACLs) are applied. There are a total of 18 monitoring wells currently installed at the landfill, as shown on Figure 4. Table 1 summarizes the construction details of the wells and identifies the lithologic units the wells monitor.

The MACLs Report dated June 2004 evaluated the water quality data collected since monitoring began in 2000 and recommended modifications to the detection monitoring program. Those modifications include a revised set of monitoring parameters and monitoring frequency. The revised detection monitoring program is summarized in Table 2. The MACLs report was submitted to the RWQCB in July 2004. The program was implemented beginning in the last quarter of 2004 following notification of the RWQCB.

The program includes: quarterly water elevation monitoring for all wells installed at the landfill; annual sampling of water quality in 5 leachate wells (GW-1a, GW-3a, GW-10a, GW-12a, and GW-13a); and semi-annual water quality monitoring of perimeter monitoring wells (GW-2b, GW-4a, GW-5a, GW-6a, GW-7a, GW-11a, GW-14a, GW-15a, and GW-16a). Water elevation data for all wells installed at the site are included in Table 3. Water quality data are summarized in Table 4. Historical data, including analytical parameters no longer included in the monitoring program, are included in Appendix B.

### 3.2 Storm Water Monitoring Program

The SWPPP was updated to comply with the new General Industrial Stormwater Permit requirements in June of 2015. The SWPPP establishes a monitoring program to eliminate unauthorized non-storm water discharges and reduce runoff carrying pollutants to the bay. The SWMP includes chemical analysis of storm water samples for parameters established in the general permit for industrial discharges, in addition to select metals associated with maritime uses, and volatile organic (VOC) and semi-volatile organic (SVOC) compounds.

### **3.3 Post-Closure Maintenance and Emergency Response Monitoring Program**

The FCPMP stipulates semi-annual inspection of the landfill cover and inspection following a seismic or large storm event. Routine inspections of the landfill cover for evidence of erosion are completed as part of SWPPP compliance. Emergency inspections are completed on an as-needed basis.

Post-closure inspections are conducted to assess the following:

- Differential settlement
- Erosion of the landfill cover
- Presence of burrowing animals
- Drainage ditches and underground storm drains
- Vegetative health
- Structural integrity

The results of post-closure and emergency inspections are reported as required by the Order and as part of the annual Storm Water Reports.

## 4.0 WATER QUALITY AND LANDFILL GAS PERIMETER MONITORING RESULTS

### 4.1 Detection Monitoring Program

Leachate and groundwater elevations have been collected since 1999. Water quality data are summarized in Table 4. Historical data, including analytical parameters no longer included in the monitoring program, are included in Appendix B. Measured elevations are summarized in Table 3. The December 14, 2015 water level elevations are contoured on Figure 5. Hydrographs for each well are presented in Figures 6a to 6r. Based on regression analysis, the 2004 MACLs report documented a small, yet consistent long-term water level rise in most wells. That trend appears to be continuing.

The landfill monitoring wells were originally installed in 1999. In February 2003 and again in July 2007 and June 2013 the reference point elevation of each well were re-surveyed to document the magnitude of on-going subsidence of the landfill. The amount of settlement varied across the site from 0.00 to 0.53 feet from 1999 to 2003. The reference point elevations of each of the monitoring wells were again re-surveyed on July 2 and 3, 2007. Settlement from 2003 to 2007 varied from 0.00 to 0.67 feet. These were re-surveyed again on June 6 and June 12, 2013 and settlement from 2007 to 2013 varied from 0.00 to 0.94 feet. The hydrographs presented in Figures 6a to 6r show the calculated water level elevations using the 1999, 2007 and 2013 survey data, with monitoring well reference point elevations interpolated between survey events.

The long-term groundwater and leachate levels were re-evaluated and compared to the rates documented in the MACLs report. The data in Table 3 and hydrographs presented in Figures 6a through 6r indicate that long-term water level trends are generally stable or rising slightly in most wells with an average rise of 0.00004 feet per year. The rate of water level rise generally varies between less than 0.000005 to 0.0002 feet per year on average. Exceptions are wells GW-2b, GW-5a, GW-13a, and GW-16a which have a slight declining trend in groundwater elevation of 0.0001, 0.00009, 0.00001, and 0.00002 feet per year. Monitoring well GW-8c, the westernmost well monitoring the upgradient bedrock zone, has seen the largest water level rise at 0.0002 feet per year, on average.

Groundwater from the 9 perimeter compliance wells and 5 interior wells was sampled on December 15-17, 2015. TestAmerica completed the chemical analyses. The laboratory analytical results are summarized in Table 4. Laboratory analytical data sheets and chain-of-custody records for monitoring event are included in Appendix A. The results are similar to those detected in previous sampling events. Points of compliance include wells: GW-2b, GW-4a, GW-5a, GW-6a, GW-7a, GW-11a, GW-14a, GW-15a and GW-16a. All results in these wells are below MACL criteria outlined below.

Parameters	MACL	Source
Benzene	71 ug/l	USEPA California Toxics Rule Criteria (May 2000), Order 99-045
Ethyl benzene	86 ug/l	Order 99-045
Chlorobenzene	129 ug/l	USEPA Recommended Ambient Water Quality Criteria
Naphthalene	470 ug/l	Order 99-045
Total Xylenes	2,200 ug/l	Order 99-045

Review of the laboratory reports indicates that all groundwater samples were analyzed within respective hold times and that quality assurance/quality control analyses (laboratory surrogate recoveries, matrix spike recoveries and spike duplicates) were within acceptable ranges. Quality assurance trip and equipment blank samples were analyzed and target analytes were not detected.

#### **4.2 Storm Water Monitoring Program**

Storm water samples collected and inspection reports for the 2014-2015 rainy season were reported in the 2014-2015 Annual Storm Water Report, dated June 2015. A copy may be found in the 2015 Semi-Annual Report. Storm water inspection and sample results for the 2015-2016 rainy season will be summarized in the 2015-2016 Annual Storm Water Report, due in June 2016. A copy of that report will be included in the 2016 Semi-Annual Report due in July 2016.

#### **4.3 Landfill Gas Perimeter Monitoring Program**

The locations of landfill gas monitoring points are shown on Figure 3, and results of quarterly monitoring conducted to date are included in Table 5.

As reported in Section 2.2, in September 2007 a passive venting trench was installed near LFG-3 to remediate elevated methane concentrations. Between September 2007 and October 2008 intensive monitoring was performed to evaluate the performance of the venting system. The passive venting trench, monitored by PVT-2 was successful at abating methane to below 5% in LFG-3 as summarized in Table 6. The City reverted to quarterly sampling of LFG-3 as described in correspondence to the SMCHSA, the CIWMB and the RWQCB from the City of South San Francisco on September 30, 2008.

During 2010 landfill gas concentrations in excess of 5% were found twice: during the first quarter a concentration of 7.7% was found in LFG-9 near passive venting trench PVT-1 and during the second quarter a concentration of 6.0% was found in LFG-3 near passive venting trench PVT-2. Methane concentrations subsequently declined to below the regulatory limit of 5% methane in all perimeter monitoring wells. During the second quarter of 2011, methane again was found at an elevated concentration of 5.5% in LFG-9. Of the remaining perimeter wells that could be sampled all were below 5% methane. During the third quarter of 2011, the City installed passive wind turbines at the exhaust of both of the PVT-1 and PVT-2 venting trenches to encourage landfill gas venting. Following the installation of the passive wind turbines, methane concentrations have again declined to below the regulatory limit of 5% methane in all perimeter monitoring wells during the third and fourth quarters of 2011, all of

2012, as well as the first, third and fourth quarters of 2013. During the second quarter of 2013 the methane concentration at LFG-3 was again above 5% as stated in the 2013 Semi-Annual Report.

At the request of the SMCHSA, an off-site groundwater monitoring well, MW-5, was added to the landfill gas monitoring program during the fourth quarter of 2011 and is consistently found to have methane in excess of 5%. A maximum reading of 20.8% methane was found in MW-5 during the second quarter of 2013. This well, shown on Figure 3 as Alexandria Well MW-5, belongs to an undeveloped property (560 Eccles Ave) owned by Alexandria Real Estate dba Gull Avenue LLC adjoining the former Oyster Point Landfill. The well is located within the City of South San Francisco's Gull Drive easement, about 5-feet west of the curb of Gull Drive. It was installed along with four other groundwater monitoring wells by Environ for Alexandria in 2008 to monitor conditions at a former burn dump (not the former Oyster Point Landfill) and therefore the City considers that any landfill gases therein are likely to be associated with that former land use. During the first quarter of 2014, well MW-5 was found to have a methane concentration of 14.2% and subsequently CSS installed a passive wind turbine here which successfully abated the methane concentration at the well to below 5%.

#### ***4.4 Proposed Modifications to the Monitoring Programs***

There are no proposed modifications to the monitoring programs.

## **5.0 LANDFILL MAINTENANCE**

### ***5.1 Storm Water Pollution Prevention Inspections***

Site inspections per the requirements of the SWPPP were conducted as required over the current reporting period. Inspection reports and stormwater sampling results for the period of July 1, 2015 through June 30, 2016 are reported in the 2015-2016 Annual Storm Water Report, due in June 2016.

### ***5.2 Post-Closure Maintenance Plan and Emergency Response Monitoring Program***

Semi-annual inspections required as part of the FCPMP are conducted concurrent with inspections performed as part of the SWPPP.

**Table 1**  
**Monitoring Well Construction Summary**  
**Oyster Point Landfill**  
**South San Francisco, CA**

Well Designation	Screened Lithology	Borehole Depth (feet bgs)	Bottom Seal Interval (feet bgs)	Screened Interval (feet bgs)	Sandpack Interval (feet bgs)	Sanitary Seal Interval (feet bgs)
GW-1a	waste	25	na	15-25	14-25	13-14
GW-2b	alluvium	140	131-140	116-131	114.5-131	112-114.5
GW-3a	waste	40	25-40	15-25	14-25	13-14
GW-4a	reworked clayey silt	16	na	6-16	5-16	4-5
GW-5a	reworked clayey silt	34.5	20-34.5	10-20	9-20	8-9
GW-6a	waste/reworked clayey silt	25	na	15-25	14-25	13-14
GW-7a	gravel fill	16	13.5-16	5.5-13.5	4.5-13.5	3.5-4.5
GW-8c	bedrock	50	45-50	35-45	32-45	30-32
GW-9a	gravelly clay	26	na	21-26	20-26	19-20
GW-10a	waste	39.5	37-39.5	22-37	20-37	18-20
GW-11a	waste/reworked clayey silt	15	na	5-15	4-15	3-4
GW-12a	waste	35.5	34-35.5	23-33	21-34	19-21
GW-13a	waste	30	26-30	15-25	14-26	12-14
GW-14a	waste	15	40162.0	4-12	3.5-12	2-3.5
GW-15a	waste/reworked clayey silt/clayey gravel	20	18-20	7-17	6.5-18	4-6.5
GW-16a	silty sand	19.5	10.5-19.5	5-10	4.5-10.5	2.5-4.5
GW-17a	waste	31.5	26-31.5	40111.0	40051.0	39972.0
MW-5*	waste/reworked clayey dilt	20	na	16-20	15-20	nr

**Notes:**

feet bgs = feet below ground surface

na= not applicable (base of well is bottom of borehole)

Both bottom seal and sanitary seal composed of bentonite

\* well MW-5 installed by Applied Consultants in 1989

nr=not reported in well log

Table 2  
 Summary of Detection Monitoring Program  
 Oyster Point Landfill  
 South San Francisco, CA

Well Designation	Unit Monitored	Monitoring Frequency	Parameters
GW-1a	Waste	Annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-3a	Waste	Annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-10A	Waste	Annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-12A	Waste	Annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-13A	Waste	Annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-2B	Underlying Sand	Semi-annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-4A	Perimeter berm	Semi-annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-5A	Perimeter berm	Semi-annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-6A	Perimeter berm and waste	Semi-annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-7A	Adjacent earth fill	Semi-annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-11A	Perimeter berm and waste	Semi-annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-14A	Perimeter berm and waste	Semi-annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-15A	Perimeter berm and waste	Semi-annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-16A	Perimeter berm and waste	Semi-annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes

Note: Water Levels will be measured quarterly in these wells

**Table 3**

<b>July 2004 MACL's</b>		<b>71</b>	<b>86</b>	<b>2,200</b>	<b>129</b>	<b>470</b>

**Notes:**

ug/L = Micrograms per liter

< = Compound not detected at or above the stated laboratory reporting limit

Samples analyzed by EPA Test Method 8260

MACL's - Maximum Allowable Concentrations Limits

\* = Carbon disulfide was detected at a concentration of 14 micrograms per liter.

\*\* = Carbon disulfide was detected at a concentration of 2.1 micrograms per liter.

\*\*\* = Acetone was detected at a concentration of 54 micrograms per liter.

(1) = Naphthalene was reported four days past the seven day hold time for unpreserved VOAs due to a naphthalene concentration in excess

of the instrument's calibration range, which required a dilution

## Glossary

**Abbreviation** These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

# Case Narrative

Client: CSS Environmental Services Inc  
Project/Site: Oyster Pt. Landfill-6551

TestAmerica Job ID: 720-69317-1

## Job ID: 720-69317-1

Laboratory: TestAmerica Pleasanton

### Narrative

#### Job Narrative 720-69317-1

### Comments

The report is revised to change the sample ID per revised COC.

### Receipt

The samples were received on 12/18/2015 4:20 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.7° C.

### GC/MS VOA

Method 8260B: The following samples were collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, the pH was outside the required criteria when verified by the laboratory, and corrective action was not possible: GW-2B (720-69317-1), GW-1A (720-69317-2), GW-3A (720-69317-3), GW-5A (720-69317-5), GW-6A (720-69317-6), GW-10A (720-69317-8), GW-11A (720-69317-9), GW-12A (720-69317-10) and GW-13A (720-69317-11), GW-15A (720-69317-13) and GW-16A (720-69317-14).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

# Detection Summary

## Login Sample Receipt Checklist

Client: CSS Environmental Services Inc

Job Number: 720-69317-1

**Login Number:** 69317

**List Source:** TestAmerica Pleasanton

**List Number:** 1

**Creator:** Arauz, Dennis

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Notes:

$\mu\text{g/L}$  = micrograms per liter

< = compound not detected at or above the stated laboratory reporting limit

Samples analyzed by EPA Test Method #270

(1) = N-Nitrosodiphenylamine was detected at a concentration of 32 micrograms per liter.

(2) = N-Nitrosodiphenylamine was detected at a concentration of 14 micrograms per liter.

(3) = N-Nitrosodiphenylamine was detected at a concentration of 13 micrograms per liter.

(4) = N-Nitrosodiphenylamine was detected at a concentration of 11 micrograms per liter.

(5) = 4-Chloro-3-methylphenol, 2,4,5-trichlorophenol, 3-nitroaniline, 4-nitrophenol, and pentachlorophenol were detected at concentrations of 11, 10, 22, 37, and 30 micrograms per liter, respectively.
